Abstract

This is a great paper and it has a concise abstract.
Keywords: List of keywords, comma separated.

1. Introduction

This is where the content of your paper goes. Some random notes:

- You should use LaTeX(Lamport, 1986).
- JMLR/PMLR uses natbib for references. For simplicity, here, `\cite` defaults to parenthetical citations, i.e. `\citep`. You can of course also use `\citet` for textual citations.
- You should follow the guidelines provided by the conference.
- Read through the JMLR template documentation for specific LaTeXusage questions.
- Note that the JMLR template provides many handy functionalities such as `\figureref` to refer to a figure, e.g. Figure 1, `\tableref` to refer to a table, e.g. Table 1 and `\equationref` to refer to an equation, e.g. Equation (**??**).

Table 1: An Example Table

Dataset	**Result**
Data1	0.12345
Data2	0.67890
Data3	0.54321
Data4	0.09876

Acknowledgments

Acknowledgments withheld.

Algorithm 1: Computing Net Activation

Input: $x_1, \ldots, x_n, w_1, \ldots, w_n$
Output: y, the net activation
$y \leftarrow 0$;
for $i \leftarrow 1$ **to** n **do**
  $y \leftarrow y + w_i * x_i$;
end
