INTRODUCTION

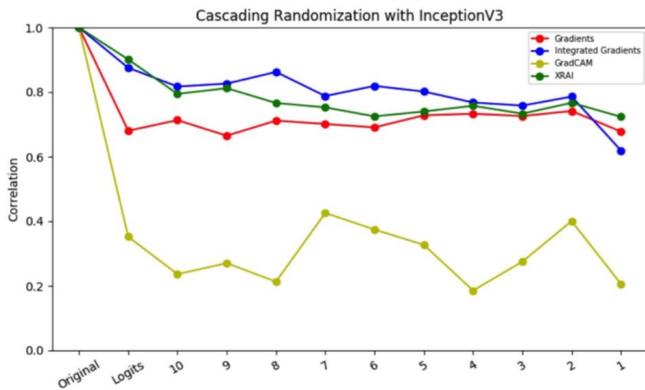

- Saliency maps highlight salient regions of input
- Popular approach for post hoc interpretability of CNNs and localization tasks
- Quantitatively assess stability, repeatability and reproducibility of these maps in a medical imaging setting

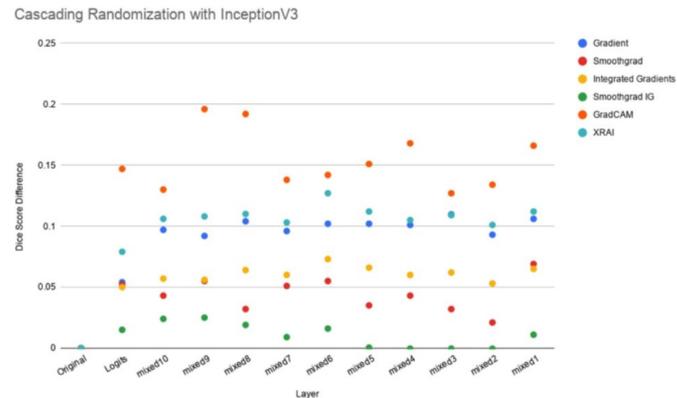

Cascading Randomization Visualizations with InceptionV3

(d)

SUMMARY AND REMARKS

- Invariance to parameter randomization
- GradCAM shows significant degradation
- Not repeatable or reproducible

- Extended study with more methods and an additional dataset supports these findings
