Clarification: Performance improvements are due to introducing English queries, not just leveraging high-resource languages.

In this revision, we clarified the main factor driving the observed performance improvement. Specifically, rather than generally attributing the improvement to the use of a high-resource language, we now emphasize that the key enhancement stems from explicitly leveraging English queries. By introducing English queries in addition to source language queries, our method achieves significant retrieval performance gains. This distinction is now clearly reflected throughout the updated manuscript, including the experimental analysis and interpretations, to highlight that the integration of English—not just any high-resource language—is crucial to the success of our Query-Synergy approach.
