Paper ID: 3

Title: Non-Parametric Neighborhood Test-Time Generalization: Application to Medical Image Classification

We thank the reviewers and meta-reviewer for their insightful and constructive feedback, which has contributed to an improved manuscript.

- We included the authors and affiliations that replaced the anonymous list and updated the anonymous link to the public github code repository.
- Based on the rebuttal discussion with the reviewers and comment from the meta-reviewer:
 - We have modified Figure 2 to include more visualizations of the method and updated the figure caption accordingly.
 - We added an algorithm in the methodology section.
 - We added standard deviations for the baselines in the main table of experiments section and uncertainty error results for a baseline as mentioned by reviewers.
 - We added additional implementation details in the experiments section.
 - We added additional limitations about using source model prototypes for target data, as mentioned by the reviewers in the conclusion section.
 - We added an acknowledgments section after the conclusion section.
- Minor modifications: We improved the sentences in terms of grammar and clarity.
