

Algebraic Failures: The mushroom dataset

An experimental demonstration, using the UCI **mushroom** dataset, that the failures of the independent stream evaluator for binary classifiers can be used to find nearly independent trios on unlabeled data.

We read some common code for the three datasets

```
In[*]:= nbDir = NotebookDirectory[];  
SetDirectory[nbDir];  
NotebookEvaluate[FileNameJoin[{nbDir, "CommonCode.nb"}]]
```

Getting the data and taking a look at the available features

```
In[*]:= {tsvHeader, benchmarkData} = ImportPennMLBenchmarksDataset["mushroom"];  
  
In[*]:= tsvHeader  
Out[*]:=  
{cap-shape, cap-surface, cap-color, bruises?, odor,  
 gill-attachment, gill-spacing, gill-size, gill-color, stalk-shape,  
 stalk-root, stalk-surface-above-ring, stalk-surface-below-ring,  
 stalk-color-above-ring, stalk-color-below-ring, veil-type, veil-color,  
 ring-number, ring-type, spore-print-color, population, habitat, target}  
  
In[*]:= mushroomFeatures  
Out[*]:=  
{{1, Nominal}, {2, Nominal}, {3, Nominal}, {4, Nominal}, {5, Nominal}, {6, Nominal},  
 {7, Nominal}, {8, Nominal}, {9, Nominal}, {10, Nominal}, {11, Nominal}, {12, Nominal},  
 {13, Nominal}, {14, Nominal}, {15, Nominal}, {16, Nominal}, {17, Nominal},  
 {18, Nominal}, {19, Nominal}, {20, Nominal}, {21, Nominal}, {22, Nominal}}  
  
In[*]:= Length /@ benchmarkData  
Out[*]:=  
<| 0 → 4208, 1 → 3916 |>
```

Independent AE failure modes

Define a sample of disjoint feature partitions to use in the experiments

```

In[*]:= featurePartitions = Table[RandomSample[mushroomFeatures] //
    Partition[#, UpTo@3] & //
    Take[#, 3] &, {1000}] //
    Map[Sort, #, {2}] & // Sort /@# & // DeleteDuplicates //
    RandomSample[#, 100] &;
Length@featurePartitions

Out[*]=
100

```
