

We include additional model EfficientAD and dataset MVTec. The results are shown in Table 1. Fastflow and EfficientAD achieve a 73.38% average improvement across the four metrics on MVTec. For EfficientAD on VisA, our formal property guidance results in an 56.11% improvement.

Table 1: Comparison of baseline and guided performance across four metrics for MVTec dataset categories with EfficientAD and FastFlow. Δ is the mean improvement percentage of the guided result from baseline.

We introduce Llama-2-7b as a new time-series anomaly detector. We additionally introduce two new time-series datasets in WADI and HAI, and present some preliminary results in Table 2. Our formal property guidance consistently yields enhancements across the four metrics. Llama-2-7b exhibits an average improvement of 67.17% in formal metrics, while GPT-2 demonstrates an increase of 53.90%.

Model	Dataset	$M_s(\downarrow)$		$M_d(\downarrow)$		$M_\omega(\downarrow)$		$M_{1-\omega}(\downarrow)$	
		Baseline	Guided	Baseline	Guided	Baseline	Guided	Baseline	Guided
