Figure 1: **Example results of generated pseudo-labels on the unlabeled training set from ScanNet.** The green bounding boxes represent proposals with an IoU score exceeding 0.25 with respect to the ground truth, while the red bounding boxes indicate false positives with an IoU score lower than 0.25. Compared to 3DIoUMatch, our method with the diffusion process is able to discover more true objects and generate less false positives as pseudo-labels.
