

544 **Maintenance Plan**

545 **Availability of data and platform** We have made FedScale open-source on the Github (<https://github.com/SymbioticLab/FedScale>). So the code and dataset can be downloaded from this
546 repository. For each dataset, we provide detailed description (README.md) of the source, organization,
547 format and use case under the repository. So far, these datasets are host on Dropbox, and we are
548 migrating them to the stable storage of AWS. For the evaluation platform FAR, we provide the
549 configuration and job submission guideline as well. We encourage the reviewer to refer to our
550 repository for more details.
551

552 **Maintenance plan and responsibility.** We are actively updating our benchmark weekly, based on
553 the feedback from the community. Currently, our dataset and platform are subject to the *Apache-2.0*
554 *License*. We respect the contributor of each dataset in following ways: (1) we provide the scripts for
555 the developer to preprocess the downloaded raw data from its original source. This will absolutely
556 obey the rule of each contributor; (2) for those publicly available and widely-used dataset, we
557 temporally host the processed data on our repository. However, we are creating permissive license
558 for each dataset and acknowledgement to respect their contributor, and highlight all assets in our
559 repository are for research purpose only; (3) for all assets in our work, we have removed the sensitive
560 information and use anonymous information to partition the data; (4) we are keeping in touch with all
561 the contributors, and will fix any issues (e.g., by removing that dataset) once that happens.
