

Dear reviewers and program chairs,

Thank you for reviewing our work *PeerChat: Scaling Peer Tutoring with AI Tutees* and for your thoughtful suggestions. Each of the suggestions has been fully addressed in the revised submission. Below, we summarize the specific changes that have been made.

- Described the four criteria we proposed to evaluate PeerChat
- Mentioned analysis on the types of mistakes made by students and PeerChat as a direction for future work, since it is out of the scope of this study
- Discussed the prompt engineering approaches we used, namely zero-shot, few-shot, and chain of thought prompting
- Clarified that 300 interactions were evaluated in order to have a large enough sample size to understand the success of each model
- Minor formatting fixes

Thank you again for your feedback and we are excited to present this work at the conference.

Regards,

Ojas Karnavat and Dr. Soren Rosier
