

# Siamese Content Loss Networks for Highly Imbalanced Medical Image Segmentation

Brandon Mac<sup>1</sup>, Alan R. Moody<sup>2,3</sup>, April Khademi<sup>1,4</sup>.

<sup>1</sup>Image Analysis in Medicine Lab (IAMLAB), Ryerson University

<sup>2</sup>Department of Medical Imaging, University of Toronto

<sup>3</sup>Department of Medical Imaging, Sunnybrook Health Sciences Centre

<sup>4</sup>Keenan Research Centre for Biomedical Science, St. Michael's Hospital

# Clinical Problem

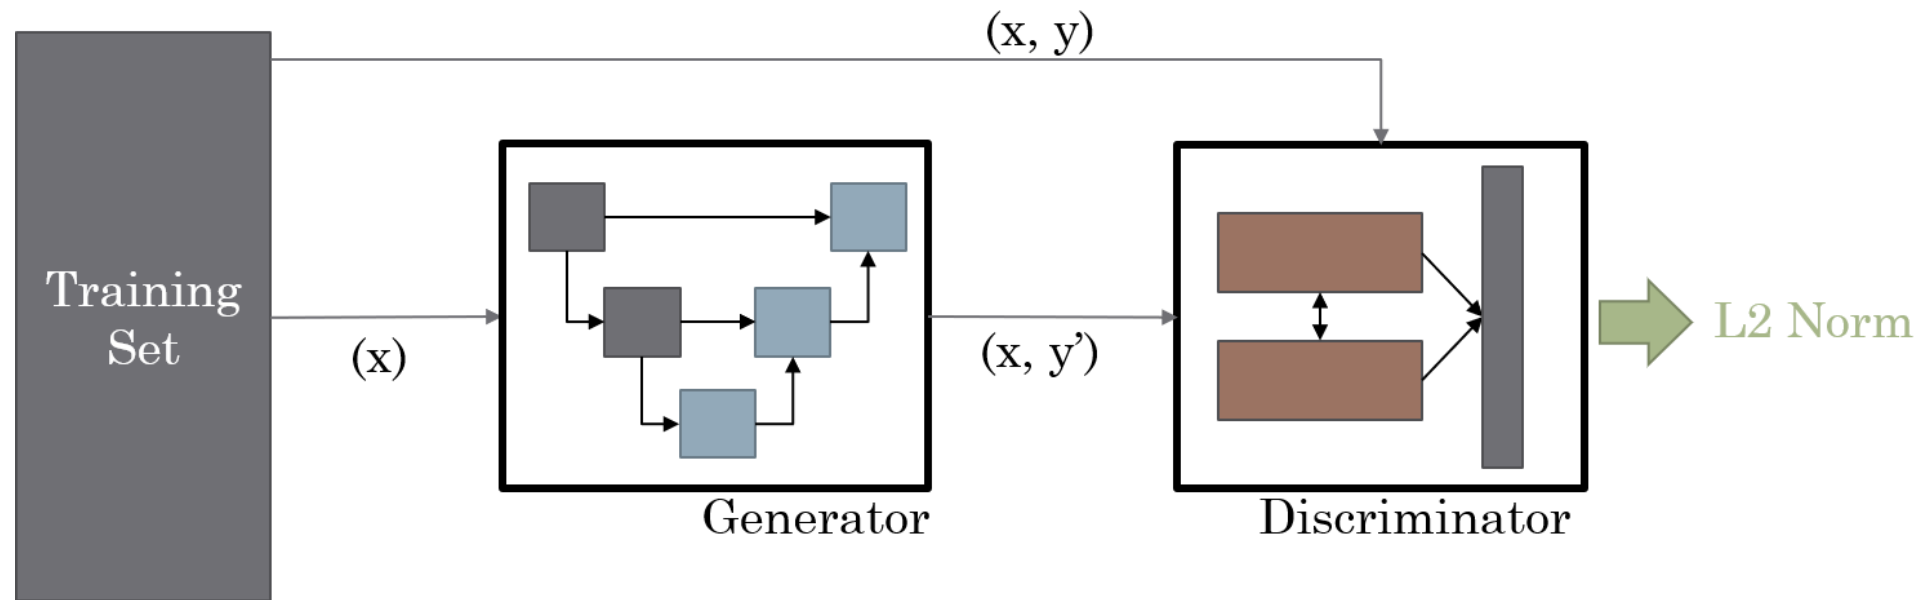

- White Matter Hyperintensities [1]
  - Local macroscopic tissue structure erosion
  - Increased water content due to inflammation
- Key Biomarker
  - Linked with stroke and dementia
- Typical analysis is manual
  - Time consuming and expensive
  - High inter- and intra- rater variability
  - Reported DSC of 0.66 [2] – 0.83 [3] between radiologists
- Our Method
  - Trained on: MICCAI 2017 WMH Grand Challenge Data (60 Volumes)
  - Validated on: Canadian Atherosclerosis Imaging Network (50 Volumes)

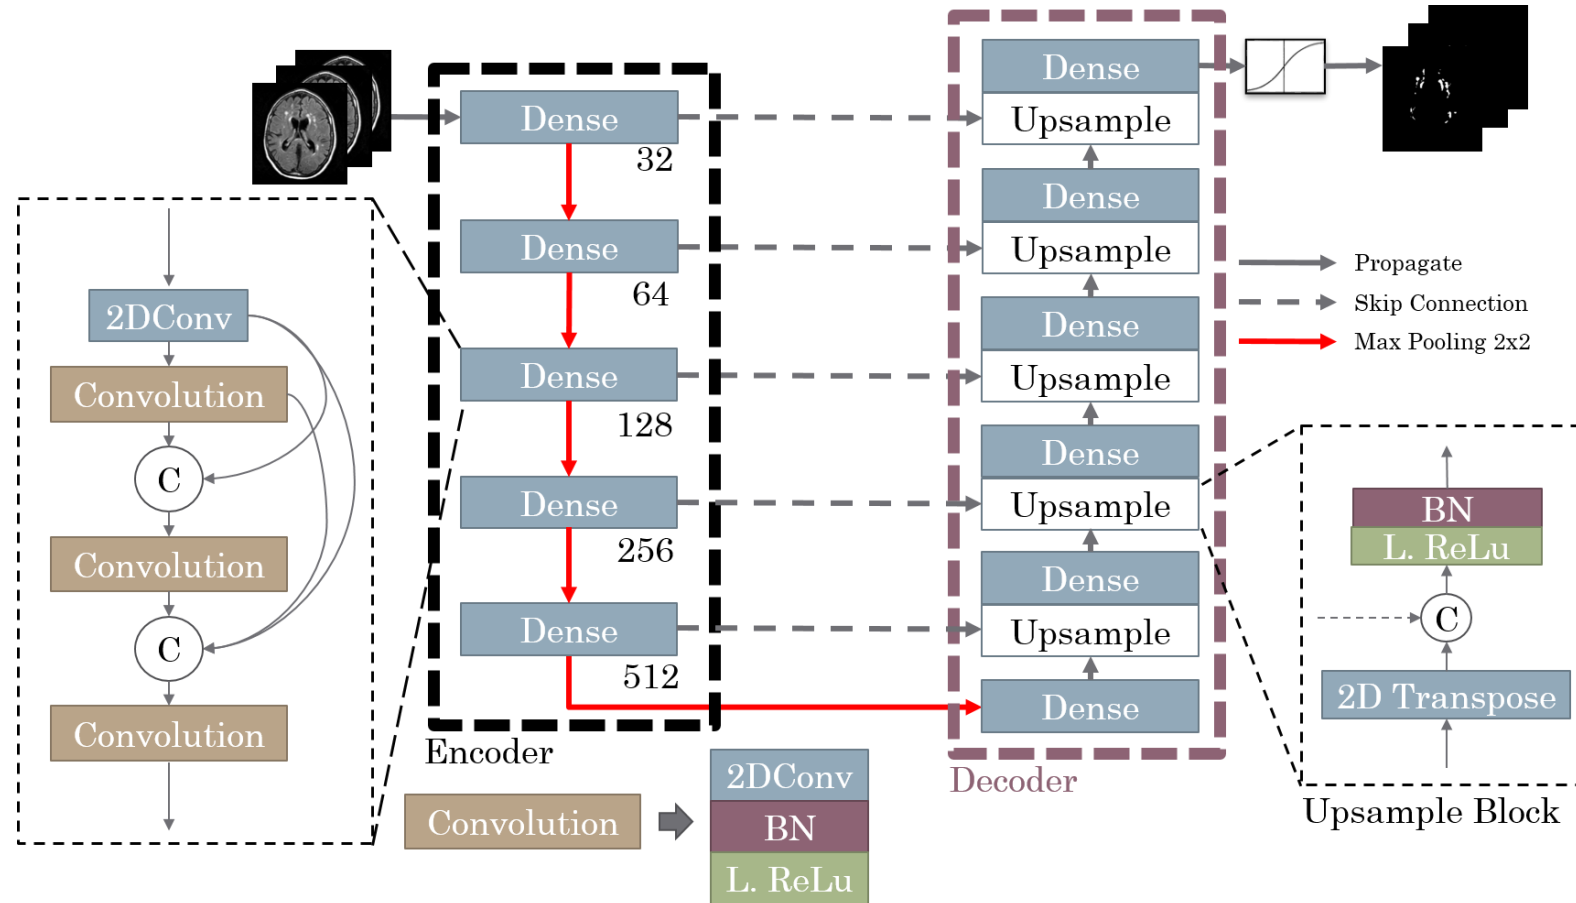

# Class Imbalance Across Subjects

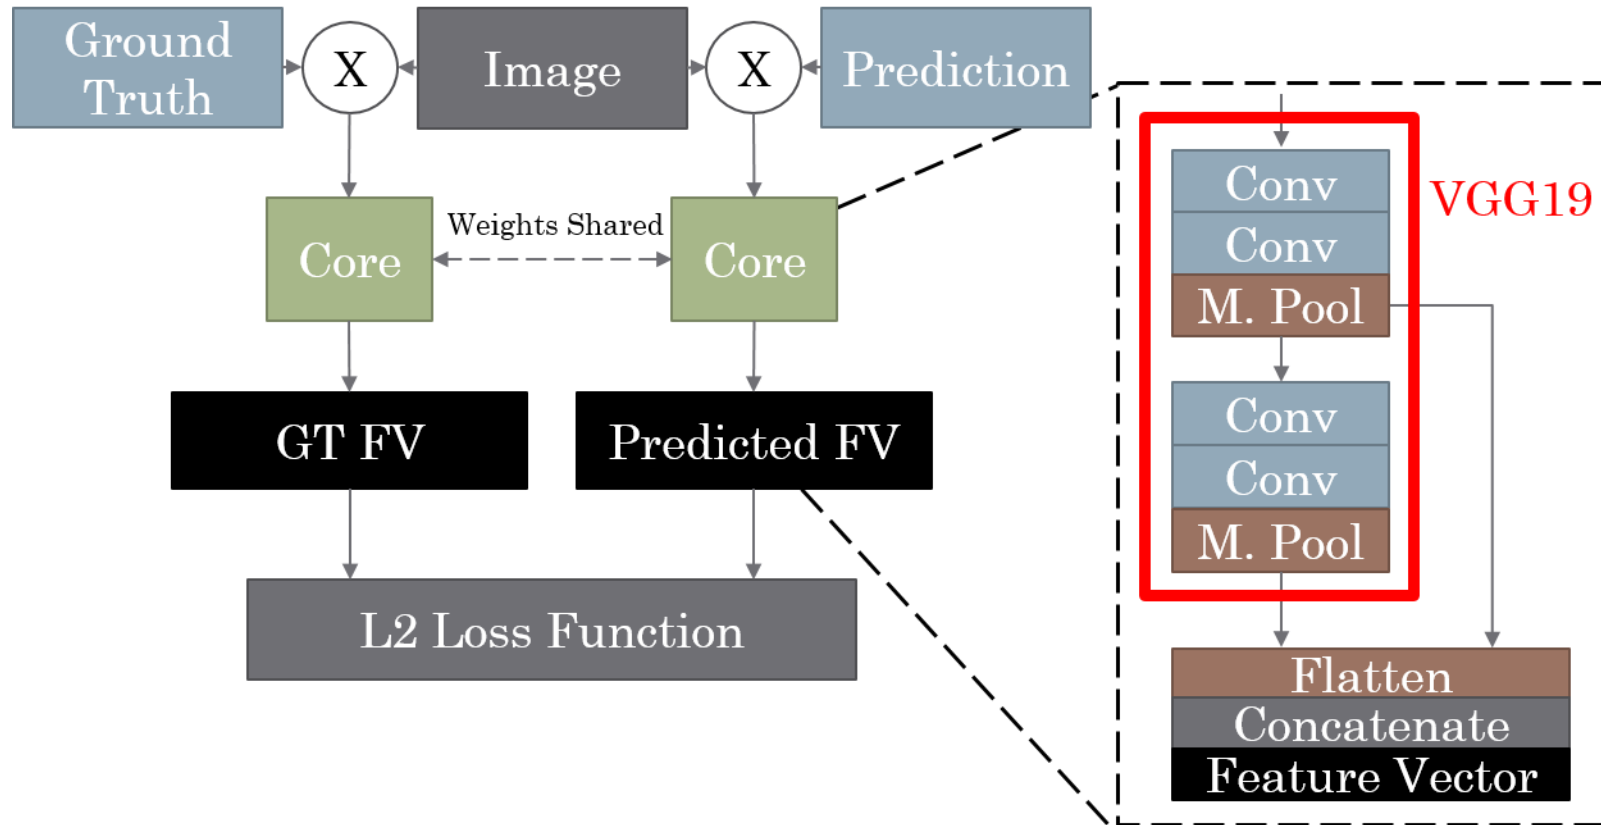

# Method – Overview

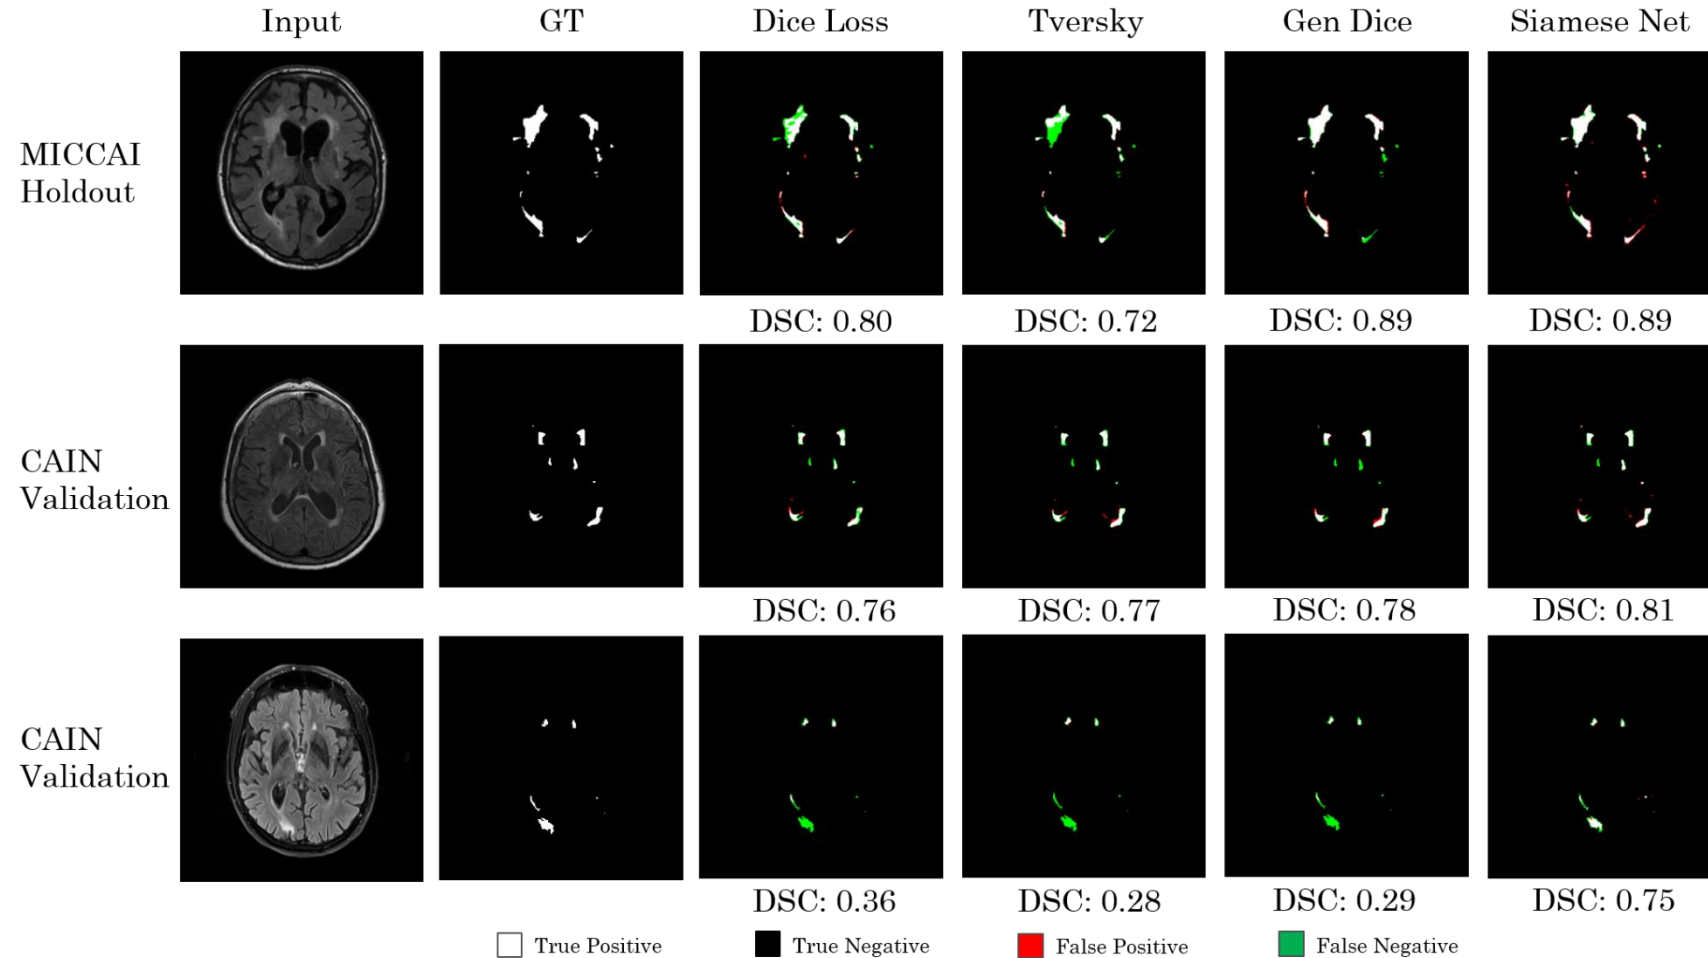

# Method – Generator

# Method – Discriminator

# Results – Segmentation

# Results – Dice Scores

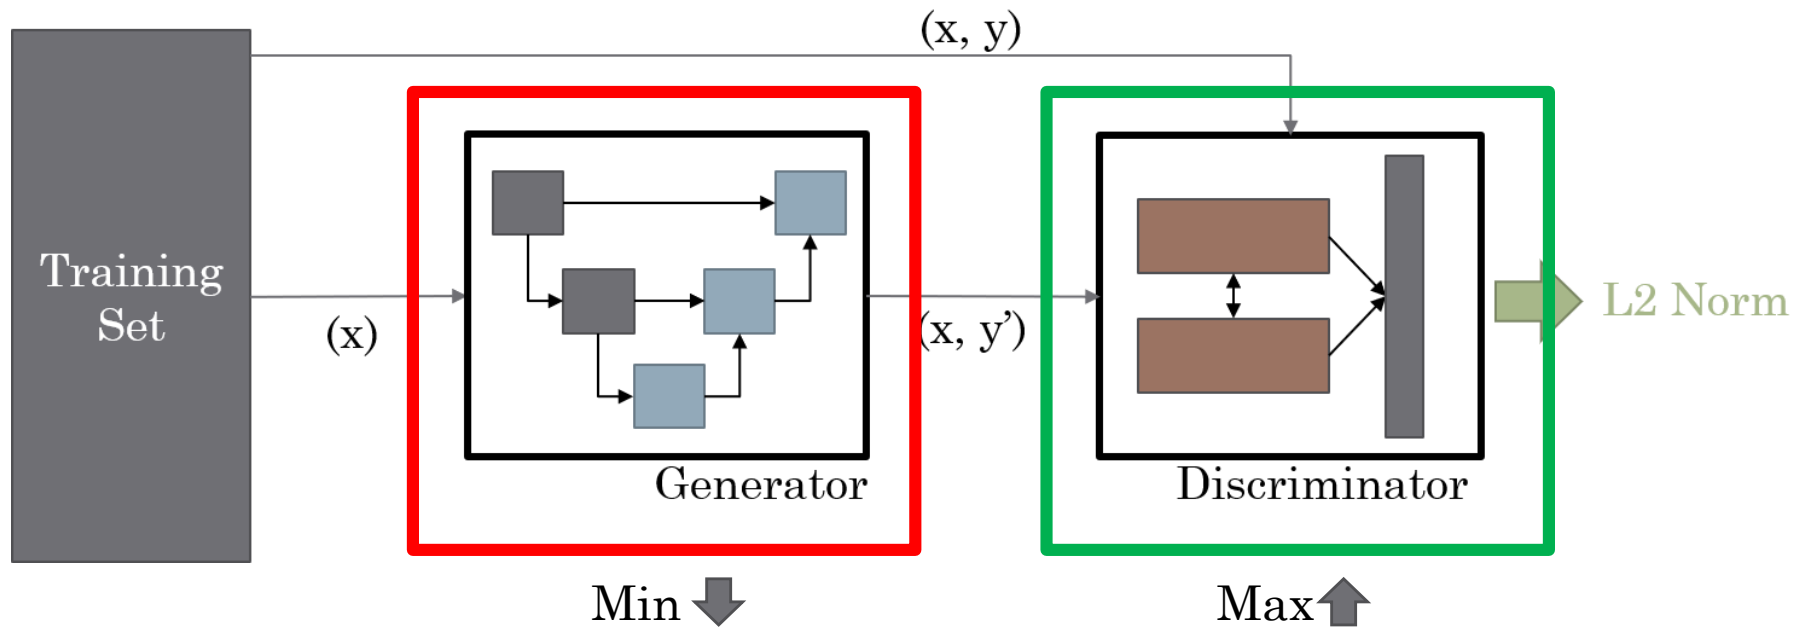

# Results – Average Volume Difference

# Future Works

- Explore configurations of the discriminator network
- Explore GANs and Deep Metric Learning methods

# Thank you for Watching
