Table IV: Performance of LD<sup>2</sup> with alternative adjacency embeddings on selected datasets. Particularly,  $P_A = ASE(A^2)$  indicates the proposed LD<sup>2</sup> model with adjacency spectral embedding denoted in Eq. (2). “OOM” means the model occurs out of RAM memory (192GB) error with applicable hyperparameters. “> 12h” means the model requires more than 12h clock time to produce proper results.

$P_A$	ASE( $A^2$ )			ASE( $A$ )			ASE( $A^3$ )			node2vec			SPD
