Introduction 1

Introduction

A computer program has learned to drive a car using **four human-defined concepts**.

The four concepts are:

1. Accelerate
2. Brake
3. Turn Left
4. Turn Right

Important: In all images you see, the car is constantly moving forward.

Introduction 2

Introduction

To explain what the car understands by these four concepts, it visualizes them for people using these four images. **Please study them now very carefully** to see if they make sense to you, and if you think the car has learned the concepts correctly.

Introduction acc

Introduction

So, the car will take the action **ACCELERATE** in situations it thinks are similar to this.

Introduction brake

Introduction

The car will take the action **BRAKE** in situations it thinks are similar to this.

Introduction left

Introduction

The car will take the action **TURN LEFT** in situations it thinks are similar to this.

Introduction Right

Introduction

The car will take the action **TURN RIGHT** in situations it thinks are similar to this.

Introduction combine

Introduction

Lastly, the car can combine concepts, and will **TURN RIGHT** and **ACCELERATE** *at the same time* in situations that it thinks are similar to *both* of these.

Example 2

Example

So, for example, here the situation is *visually similar* to the concept "Turn Left".

So the car is likely going to turn left and drive off the road crashing!!!

Situation

Concepts

Example 3

Example

As another example, here the situation is visually similar to the concepts "Accelerate" and "Turn Right".

So the car is likely going to turn right, accelerate, and again drive off the road crashing!!!

Situation

Concepts

Example 4

Example

Lastly, here the situation is visually similar to the concept "**Brake**".

So the car is likely going to *brake!!!*

Block 51

Introduction

It is up to you to look at the current situation, and guess *what actions* the car is going to take.

Your Task

Your Task!

However, even if the car has learned to drive well, it cannot drive safely when it encounters situations which are EXTREMELY different to the concepts it has learned.

It is up to you to decide if this is happening.

So, there are two main things you want to consider when predicting if the car will crash:

1. Are the actions the car is going to take safe in the situation?
2. Is the current situation too different to the car's learned concepts that the car has no idea what to do?

Title

Press Next For The Task Instructions

Instructions 1

Instructions

Initially, note the car's situation and the road ahead it must try to navigate safely.

Step 1: Note the Situation

Instructions 2

Instructions

Secondly, recall the learned concepts (these will NEVER change).

Step 2: Recall the car’s learned concepts

Instructions 3

Instructions

Lastly, *predict if the car will drive safely* through the road ahead, *and your confidence* in this prediction.

There are **five options** ranging from "**Strongly Disagree**" to "**Strongly Agree**".

Step 3:

	Strongly Disagree				Strongly agree
The car will drive safely in this situation	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
I am confident in this prediction	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

Red Obstacles

Red Obstacles

Lastly, there are red obstacles scattered throughout the roads

If the car crashes into these it will *not drive safely*.

Block 51

Remember, you are trying to predict what the computer program is going to do here while driving the car.

You are NOT trying to convey how you would personally drive.
