

# Supplementary Materials: SelM: Selective Mechanism based Audio-Visual Segmentation

Anonymous Author(s)

This supplementary material mainly includes two aspects:

- (1) More details on DAM and BCSM (Figure 1 and Figure 2).
- (2) More experimental results.
  - Qualitative comparisons on S4 setting (Figure 3);
  - Ablations on AVSS setting (Table 1);
  - Ablations on fusion stages (Table 2);
  - Ablations on auxiliary loss coefficient (Table 3);
  - Parameters about SelM (Table 4);
  - Ablation study on Learnable Query Dimensions (Table 5);
  - Various initialization techniques (Table 6);
  - Ablation study on DAM under AVSS setting (Table 7);
  - Ablation study on BCSM under AVSS setting (Table 8).

```

def DAM_A2VBlock(x, # Visual Feature [B T C H W]
                 y # Audio Feature [B T C 1]
                 ):
    x = reshape(x) # [B T H*W C]
    x = Dropout(Gelu(Conv1d(x))) # align
    y = Conv1d(y) # align

    # compute sim_map(visual as query, audio as key and value)
    sim_map = cross_attention(x, y) # [B T 1 H*W 1]

    # get the weighted audio feature
    y = reshape(y) # [B T 1 1 C]
    y = reshape(sim_map*y) # [B T H*W C]
    y = Norm(Conv1d(y)) # align

    # conduct a multiply of weighted audio and visual Feature
    x = x*y # [B T H*W C]
    x = Dropout(Gelu(Conv1d(x))) # output the Aligned Feature

    return x
    
```

Figure 1: Example of DAM-A2VBlock Algorithm. This pseudocode outlines the steps for aligning audio and visual features.

Method	AVSS	
	$M_J \uparrow$	$M_F \uparrow$
w.o.DAM	31.2(-0.7)	36.4(-0.8)
w.o.BCSM	30.3(-1.6)	35.4(-1.8)
w.o.CLEVER	28.4(-3.5)	33.2(-4.0)
<b>SelM</b>	<b>31.9</b>	<b>37.2</b>

Table 1: Comparative Analysis of Module Performance.

```

def BCSM_A2V_Sem(x, # Visual Feature [B T C H W]
                 y # Audio Feature [B T C]
                 ):
    # pass the audio feature through the vanilla mamba block
    # with the layernorm and skip-connection
    y = y+mamba(Norm(y)) # for three layers

    # the shape of y : [B T C]
    # use linear layer for align
    # use SiLU layer for map features to [0,1]
    audio_gate = SiLU(linear(y)) # [B T C]

    # conduct a multiply for audio gate and Visual Feature
    # with skip-connection
    x = x+audio_gate*x

    return x
    
```

Figure 2: Illustration of the BCSM-A2V\_Sem Procedure. The pseudocode details the process for enhancing audio-visual correspondence through a mamba block with layer normalization and skip connections. It includes a SiLU-activated linear layer for feature mapping, followed by an audio gating mechanism to integrate audio and visual features.

Stage	S4		MS3
