

### Ground Truth Caption:

Enhanced CT scan of the chest revealed an anterior mediastinal tumor (black arrow).

### LLaMA32-Med Output:

Chest CT (axial view) showing a soft-tissue mass in the mediastinum, consistent with a mediastinal tumor.

### Original LLaMA 3.2 Output:

The image depicts a transverse section of the chest region, taken from a patient with a known history of lung cancer. The axial view shows a large, rounded, slightly irregular mass located within the superior mediastinum. This area of the chest contains vital structures including the aortic arch, which gives way to the arch of aorta before entering the chest cavity and extending its length into the abdominal region and the right and left subclavian arteries, which supply blood to the lungs and limbs respectively.
