

Code for Testing the Ensemble-in-One Models

Acknowledgement

We borrow the codes of DVERGE for testing the robustness of our models for fairly comparing the effectiveness of different methods. The dependencies, data and pre-trained models of Baseline, ADP, GAL, and DVERGE can refer to the README.md in the code file. The original repo is [git@github.com:zjysteven/DVERGE.git](https://github.com:zjysteven/DVERGE.git)

Evaluation

Examples of evaluation scripts can be found in `scripts/evaluation.sh`. We have already put our models in the checkpoints file.
