Here are the list of files and folder included in the supplementary material:

1. The **Log_data** folder contains the interaction logs from the participant sessions. Using these logs, we computed

   a. Participants' exploration time,
   b. the time they spent reading the text descriptions,
   c. the number of times they clicked on summary types,
   d. the number of times they clicked on feature types,
   e. the number of times they hovered on data points in the You_graph,
   f. the number of times they hovered on the Baseline_graphs (Cohort and All graphs)

We computed the time spent in reading the text descriptions by computing the times when the mouse was in the text description area (marked by *mouseenter_textDescription* and *mouseenter_leaveDescription* labels in the interaction logs) and we corroborated these times from the participant videos.

2. The pre- and post- study questionnaires and their responses are in **Pre-study questionnaire.pdf, Post-study questionnaire.pdf, Pre-study_questionnaire_responses.csv, and Post-study_questionnaire_responses.csv.**

3. The questionnaire ratings and computed interaction log metrics are in the **Data_analysis.csv** and Spearman's Correlations among these variables are in **SpearmanCorrelations.html.**

4. Additional study details are included in the **Additional details.pdf** and the **User_Engagement_responses.pdf** shows the individual items of and overall participant ratings for the user engagement questionnaire.

5. Instructions given to participants are included in the **Instructions.pdf**
