**Editors:** Under Review for MIDL 2024

## Abstract

This is a great paper and it has a concise abstract.  
**Keywords:** List of keywords, comma separated.

## 1. Introduction

This is where the content of your paper goes. Some random notes<sup>1</sup>:

- You should use L<sup>A</sup>T<sub>E</sub>X(Lamport, 1986).
- JMLR/PMLR uses natbib for references. For simplicity, here, \cite defaults to parenthetical citations, i.e. \citep. You can of course also use \citete for textual citations.
- Eprints such as arXiv papers can of course be cited (Hinton et al., 2015). We recomend using a @misc bibtex entry for these as shown in the sample bibliography.
- You should follow the guidelines provided by the conference.
- Read through the JMLR template documentation for specific L<sup>A</sup>T<sub>E</sub>Xusage questions.
- Note that the JMLR template provides many handy functionalities such as \figureref to refer to a figure, e.g. Figure 1, \tableref to refer to a table, e.g. Table 1 and \equationref to refer to an equation, e.g. Equation (1).

## Acknowledgments

We thank a bunch of people.

**Algorithm 1:** Computing Net Activation

---

**Input:**  $x_1, \dots, x_n, w_1, \dots, w_n$

**Output:**  $y$ , the net activation

$y \leftarrow 0$ ;

**for**  $i \leftarrow 1$  **to**  $n$  **do**

$y \leftarrow y + w_i * x_i$ ;

**end**

## Appendix A. Proof of Theorem 1

This is a boring technical proof of

$$\cos^2 \theta + \sin^2 \theta \equiv 1. \tag{1}$$

## Appendix B. Proof of Theorem 2

This is a complete version of a proof sketched in the main text.
